MRI PELVIS

TECHNIQUE:

High-resolution, multiplanar MR imaging of the pelvis and bilateral hip joints was performed on a 3 0 Tesla scanner. Protocols include T1-weighted, T2-weighted, STIR, and post-contrast fat-suppressed sequences in coronal, sagittal, and axial planes.

FINDINGS:

Right Ilium & Osseous Destructive Lesion

- **Bone Destruction & Marrow Signal:** Altered marrow signal intensity osseous destructive lesion is seen involving the right ilium blade and the supra-acetabular part of the right ilium bone. The lesion demonstrates a moth-eaten pattern of bone destruction with associated aggressive periosteal reaction.
- **Sacroiliac & Hip Joints:** There is no extension of the lesion into the right sacroiliac (SI) joint. Similarly, no extension is seen into the right hip joint cavity. articular cartilage and femoral head sphericity are preserved.

Soft Tissue Component & Muscle Infiltration

- **Pelvic Cavity Component:** There is an adjoining large irregular soft tissue component arising from the osseous lesion, which is involving the pelvic cavity and infiltrating the right iliacus muscle.
- **Gluteal Region Infiltration:** The soft tissue component laterally encroaches into the right gluteal region, directly involving and infiltrating the right gluteus maximus, gluteus medius and gluteus minimus muscles.

Neurovascular & Contralateral Evaluation (Normal Points)

- **Vascular Structures:** No neurovascular encasement (external iliac or femoral vessels) is identified.
- **Contralateral Pelvis & Hip:** The left ilium, left hemipelvis, and left hip joint appear completely normal in alignment and signal intensity without focal lytic or blastic lesions.

IMPRESSION:

1. Aggressive Osseous Destructive Lesion of Right Ilium:

• Altered marrow signal intensity destructive lesion involving the right ilium blade and supra-acetabular region with a moth-eaten destruction pattern and aggressive periosteal reaction

2. Extensive Soft Tissue Extension & Muscle Infiltration:

• Large adjoining soft tissue mass involving the pelvic cavity and infiltrating the right iliacus muscle.

• Lateral extension into the right gluteal region involving the right gluteus maximus, medius
